README

Twitter Sentiment Analysis on Apple and Google Products

Project Overview

This project builds an NLP model to classify tweets about Apple and Google products as positive, negative, or neutral.

Business Problem

Companies receive thousands of tweets daily. This model automates sentiment classification to help businesses monitor customer feedback efficiently.

Dataset

- Source: CrowdFlower via data.world
- 9,070 tweets with sentiment labels

Models Used

- Multinomial Naive Bayes
- Logistic Regression (best performer - 69.3% accuracy)
- Random Forest Classifier

Technologies Used

- Python, pandas, numpy
- NLTK, scikit-learn
- Matplotlib, seaborn

Repository Structure

- student.ipynb - Main project notebook
- presentation.pptx - Non-technical presentation
- judge-1377884607_tweet_product_company.csv - Dataset
